

## Team Project, Part 3

1. Final Build and Documentation -- 20 pts.
2. Peer Evaluation -- 20 pts.

Please check the “Team Project Part 3” assignment on Canvas to learn more about the Team Project.

### Team Project Final Build

On this final step of the Team Project development you need to take the individual pieces of work done by each team member and put them together. Do not assume it will be an easy process. All members of the team should participate in it. You will have some time during the class set aside for this activity. Please turn in the .cpp and .exe of the final built into this assignment drop box.

### Teamwork Peer Evaluation

Use the form provided in the Teamwork Peer Evaluation Form.docx (see Team Project Part 3 page on Canvas) to evaluate your own team experience and performance of your teammates. The evaluations should be turned into the drop box attached to this assignment.

The results of these evaluations will have no impact on your grade. Your evaluation will not be shared with the members of the team.

I will use peer evaluations together with my own observations to grade your performance in the team according to the Teamwork Rubric. The “teamwork grades” will not be a part of your total grade for the course. They will not be available through the Canvas grade book. I will send out a “report” to each of you.
